

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	28 September 2026
Team ID	SWTID-2026-9038
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Team gathering: All four team members participated in the session and shared their ideas.

Goal: Decide how record access can be controlled in ServiceNow using an ACL script.

Problem Statement: How might we restrict access to records in ServiceNow based on a field value, so that only authorized roles can view or edit sensitive data?

Key rules of brainstorming: Stay in topic, encourage wild ideas, defer judgment, listen to others, go for volume, and be visual if possible.

Step-2: Brainstorm, Idea Listing and Grouping

Team Member	Idea
K.Kumutha (Team Leader)	ACL with a script condition that checks a field value (e.g., Status = Confidential)
R.Siva Dharshini	Create roles (bb1–bb4) and assign them to users for role-based access
S Vayshavi	Field-level ACL to hide or make specific fields read-only; use custom table u_institution_details as demo data
M Jasmin	Test with impersonation using different users to verify access

Grouping of ideas:

Cluster	Ideas Grouped
Role Setup	Roles bb1–bb4, assigning roles to users

ACL Rules	Table-level, record-level and script-based ACL
Testing	Impersonation, positive and negative test cases

Step-3: Idea Prioritization

The ideas were placed on the Importance vs Feasibility grid to decide which ones matter most and are easiest to implement.

Priority Level	Ideas
High Importance + High Feasibility	Script-based ACL on field value; role assignment to users
Medium Importance / Feasibility	Field-level ACL to hide or restrict specific fields
Low Priority	Extra automation and notifications

Selected Idea: Script-controlled ACL using a field-value condition, supported by role assignment (bb1–bb4) and verified through impersonation testing.
