

Project Design Phase

Problem – Solution Fit Template

Date	28 September 2026
Team ID	SWTID-2026-9038
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Team Leader: K. Kumutha | Members: R. Siva Dharshini, S. Vayshavi, M. Jasmin

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- Understand the existing situation in order to improve it for your target group.

Template: Script-Controlled ACL – Restrict Record Access Based on Field Value

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS ServiceNow administrators who manage institution records, and staff users with roles bb1-bb4 who work with the u_institution_details table.	6. CUSTOMER CONSTRAINTS CC Records must be visible only to authorised users. No extra plugins or licences. Must work inside ServiceNow. Limited admin time for manual checking.	5. AVAILABLE SOLUTIONS AS Role-based ACLs only, or manually hiding records. Pros: simple to set up. Cons: they ignore the record's field value and are not flexible.	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Restrict who can view or edit a record based on its field value. Keep sensitive institution data protected. Give each role only the access it needs.	9. PROBLEM ROOT CAUSE RC ACLs depend only on static roles and never check the field value of the record, so restricted records stay exposed to other users.	7. BEHAVIOUR BE Admins create roles and ACLs, test access with bb1-bb4 users, and check records manually to confirm who can see what.	
Focus on J&P, tap into BE, understand RC	3. TRIGGERS TR A user opens a record they should not see, an audit asks who can view what, or new institution records are added.	10. YOUR SOLUTION SL Script-controlled ACL: write an ACL script that checks the record's field value and the user's role, then returns true to allow access or false to block it. It fits the customer's limits because it uses built-in ServiceNow scripting, needs no extra tools, and applies the rule automatically and consistently.	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE: Users open records through ServiceNow lists and forms and learn from ServiceNow docs, community and training.	Focus on J&P tap into BE, understand RC
	4. EMOTIONS: BEFORE / AFTER EM Before: worried and insecure about data leaks. After: confident and in control, with secure field-based access.		8. CHANNELS of BEHAVIOUR CH 8.2 OFFLINE: Team discussions and training sessions; admins explain the access rules to staff in meetings and documents.	
Identify strong TR & EM				Extract online & offline CH of BE
