

Functional & Performance Testing Template

Model Performance Test

Date	28 September 2026
Team ID	SWTID-2026-9038
Project Name	Script-Controlled ACL - Restrict Record Access Based on Field Value
Maximum Marks	100

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result / Pass/Fail
FT-01	Role & Field Value Validation (e.g., Security Clearance Level)	Log in as User without required security level and attempt to view restricted record where 'Clearance Field' = 'Confidential'	Access denied; record is hidden or read-only based on field value validation rule	Access Denied as expected. [Pass]
FT-02	Field Value Range & Condition Check (e.g., State/Status field)	Attempt record update when status field value is set outside authorized user workflow state	Accepts valid field transitions, displays access restriction error for unauthorized field states	Unauthorized states restricted. [Pass]
FT-03	Script Execution & Record Evaluation	Provide complete record data with varying field values and trigger ACL script evaluation engine	Correct access privileges (Read/Write/Delete) dynamically assigned based on field value script outcome	ACL Script evaluated accurately. [Pass]

FT-04	Database & API Connection Check	Verify backend ACL script engine connection and API query evaluation for restricted records	API responds successfully with appropriate field-level authorization headers	API & DB responding correctly. [Pass]
PT-01	Response Time Test	Measure script execution and record access evaluation latency during record fetch requests	Should be under 3 seconds (target < 50ms script execution)	Avg Evaluation: 12ms. [Pass]
PT-02	API Speed & Concurrency Test	Send multiple concurrent record access API calls subject to script-controlled ACL rules	API and script evaluation should not slow down under concurrent requests	Handled 100 req/sec smoothly. [Pass]
PT-03	Bulk Data Access Load Test	Execute bulk record query operations requiring field-based ACL script evaluations across multiple rows	ACL script processes query restrictions smoothly without timing out or crashing database connection	Processed 5000 rows without lag. [Pass]
